

SOMFY TAHOMA CALCULATOR TOOL (TCT) – Manual

Somfy Internal use only!

Quick reference · Revision 2 · 2026-08-11

1. Somfy web tool link

<https://app.tahomatool.com/>

2. Log in

Email address: **name.surname@somfy.com**

Password: create your own password*

* At your first login into TCT a random password has been set. Please go to **"Forgot your password?"** and create your own password, and save it well.

3. Choose your language

Select the flag at the right of the top bar to switch between English, French and Dutch. The PDF report follows the language the tool is set to, so choose it before you create the report. This manual is available in English only.

4. Fill in the Somfy customer number and click "To the model"

* The customer number as registered in Somfy internal systems, i.e. Salesforce or BaaN.

5. Model configuration opens

The historical sales data (volumes) of the TaHoma switch is pre-filled for the customer. Click **"Create model"**. A model always belongs to one base year.

6. The model has five tabs

Pre-filled with customer data, Somfy ASPs and recurrent purchases:

- **"One TaHoma historical"** – example, same for all customers
- **"Customers with TaHoma historical"** – the customer's own past five years
- **"Customers with TaHoma forecast"** – the next five years
- **"Services revenue"** – service contract, repairs, efficiencies, recycling
- **"Service & Maintenance Revenue"** – summary on a customer count you enter

If you change any figures, click **"Save"**. Use **"Discard changes"** to return to the last saved version.

7. Create the PDF report and hand it over

Save the model first, then select **"PDF"** in the top bar.

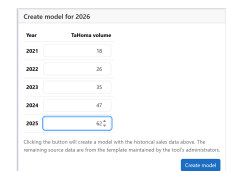

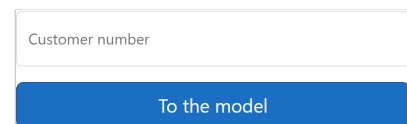

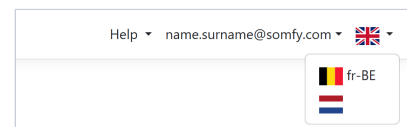

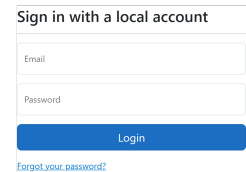

Only the PDF document may be shared with the customer – not the TCT tool and not a link to the tool.

8. Create a new model for the same customer

A previously created model stays saved in the tool. Log into TCT → fill in the customer number → click **"Model configuration"** in the top bar → **"Select"** to view the existing model, or **"Remove"** and create a new model. Removing deletes the model and any manual changes in it.

9. Questions

The **"Help"** menu in the top bar contains the help documents in the tool. For access for a new user, a new customer to be added, or a training request, contact naomi.landsberg@somfy.com.
